Care 8

MAINTENANCE INSTRUCTIONS FOR PANEL APPLICATIONS

Cleaning Code WS: Clean with mild detergent or shampoo, foam or water-free solvent as desired. Do not saturate with liquid.

- Blot out fresh spills immediately working from the outer edge of the stained area moving inward. Always pre-test inconspicuous areas first
- Ensure that the fabric is adequately rinsed well with clear water after cleaning, and dry the fabric as quickly as possible.
- Oil-based stains may be treated in a similar manner, substituting a solvent-based cleaner for the detergent solution. Always follow the manufacturer's recommendations for using such products, and always pretest in an inconspicuous area of the fabric for colorfastness to the cleaning agent.
- Heavy stains must be treated by a professional that specializes in interior furnishings.
- Please be careful: These instructions are for the fabric only. Some fabric cleaning methods may cause damage to underlying materials used to make the furniture item.
